

OL SERIES 740-15

S-20 Response PMT Module

The OL 740-15 is a high-gain, S-20 response photomultiplier with an ultraviolet transmitting window mounted in a nu-metal shielded housing. The PMT housing is completely assembled and mounts directly to the exit port of the OL Series 750 monochromator. Two connectors are provided: one for the HV bias and one for the detector signal. The S-20 response PMT is sensitive over the 200 – 800 nm wavelength region.
